

**AMENDMENTS TO ABSTRACT**

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

A liquid crystal display includes pad members having a different length from each other, thereby compensating for differences in the resistance of electrode links. The pad members are in contact with a driving circuit and the electrode links, and have a different length from each other in accordance with a length of the electrode link. Each pad member comprises a pad and a transparent electrode.
